FEBRUARY 2025

NEWSLETTER #5

ABOUT PROJECT

The B-GREEN project aims to develop strong ecological mindset in students aged 12 to 18, enabling them to proactively tackle current environmental challenges and demonstrate a strong commitment to their communities.

B-GREEN aims to achieve this by offering innovative, green-oriented teaching and learning tools that will help schools become eco-friendly, drive social change, and promote sustainable development. Four project results (PR) are planned to be developed though the BGREEN project and teachers from different fields of expertise will have access to them.

B-GREEN C2 BLENDED MOBILITY

From February 3 to 6, students and teachers from Italy, France, Cyprus, and Portugal participated in various environmental and sustainability-focused activities throughout the week.

These included planting native species, removing invasive plants, birdwatching, and engaging in beach cleanups, ecological restoration projects, and visits to green initiatives. They also visited Agrupamento de Escolas António Gedeão, where they explored the school's green initiatives and each partner showcased the Green Clubs.

They also participated in interactive workshops on plastic upcycling, carpentry, waste sorting, and robotics emphasising hands-on learning about sustainability.

Lastly, they explored the BGREEN AR game and platform, using technology to develop their green skills.

B-GREEN 4TH TRANSNATIONAL PROJECT MEETING

We are happy to share the highlights from the 4th and last transnational project meeting, which took place in Almada, Portugal on the 7th of February, bringing together all partners for final revisions and planning the next steps.

After thorough discussions and feedback, we finalised the revisions of the 4 Project Results to make the necessary adjustments to ensure the quality of the project.

We also discussed the communication, visibility, and dissemination strategies for the project, outlining steps for finalising and sharing our results.

Now that the project is nearing its completion, we are focusing on the remaining tasks, including the multiplier events and the final report. These final steps will help us share not only our results but also ensure the project's sustainability and impact.
